Neurorehabilitation

TheraSuit

The TheraSuit Method uses specific exercises and equipment to improve range of motion, posture, balance, flexibility and function. The main device used in this method is called a TheraSuit. This soft brace enhances postural control to allow isolated exercises within normal pattern of movement.

TheraSuit

Suitable for patients of all ages, it is used to treat:

- Cerebral palsy
- Stroke
- Brain and spinal cord injury
- Development delays

"The exciting news is that Intensive Suit Therapy, provided by Revivo in Scarborough, is sending the right kind of sensory stimuli to our son's brain..."

WHAT BENEFITS CAN BE EXPECTED?

- Retrain nervous system
- Increases range of motion
- Enhances posture
- Improves balance

"...improving coordination of movement and strengthening his trunk, but also improving his visual and listening abilities by improving his proprioception awareness of where he is space..."
